DIAGNOSIS QUIZ FOR P2P - OVNET

IMPORTANT REMARKS:

- It is important to fill the ID number of the student and the code of the test.
- IT IS COMPLETELY FORBIDDEN TO USE ANY KIND OF COMMUNICATIONS DEVICE.

Pregunta 1 According to the paper of Wallach about p2p security issues, which one of the following statements is FALSE regarding secure nodeId assignment?

- ☐ We must concern with Sybil attacks, wherein a hostile node might try to get a large number of nodeIds
- ☐ Reputation cannot be used as a way of maintaning nodeid stability and honest cooperation
- ☐ There are schemes that do not need a centralized authority, but in these cases an attacker can rejoin the network to gain an advantage
- ☐ The simplest design to perform secure nodeId assignments is to have a centralized authority that produces cryptographic nodeId certificates

Pregunta 2 Which of the following sentences is TRUE regarding reputation systems in p2p?

- ☐ Second hand information (opinions) is considered a trusted source of reputation information
- ☐ Reputation systems neither promote the honest cooperation of nodes, nor are affected by the stability of identities
- ☐ A malicious node using the Sybil attack can disrupt the proper working of the reputation system
- ☐ Reputation systems cannot be used to make better routing decisions

Pregunta 3 According to the paper of Stoica et al. about Chord, which of the following statements is FALSE regarding the bootstrapping process of newcomer n, using a bootstrapping node b?

- ☐ n learns the identity of b by means of some external mechanism
- ☐ Node n has to contact with the node immediately following n to transfer responsibility for all relevant keys
- ☐ Node b sends half its keys to n for replication purposes
- ☐ n learns its predecessor and fingers by asking b to look them up
