Electronic Instrumentation and Optoelectronics LAB

LAB0: Introduction

The aim of this LAB session is to introduce the LAB.

This LAB course is devoted to the knowledge of instrumentation and measurement, data acquisition and the design of an small measurement project.

The two first LAB lectures are devoted to remember how measurement instruments work and how to use LabView© the software package that we will use to control the acquisition board.

LAB0: Equipment in the Lab

In your work bench you have the following instruments:

	 RTB2004	 keysight 34465a	 agilent 33220A		
E3631A	DSO3062A	HP34401A	33120A	USB NI6008	Personal Computer
Power Supply	Digital Oscilloscope	Digital Multimeter	Function Generator	Data Acq. Board	

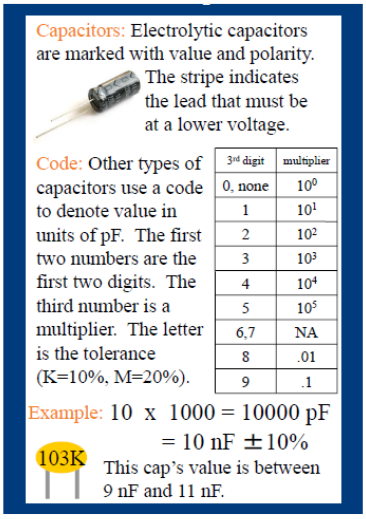

You have all the necessary documents for the LAB lectures and instrument manuals in **ATENEA.**

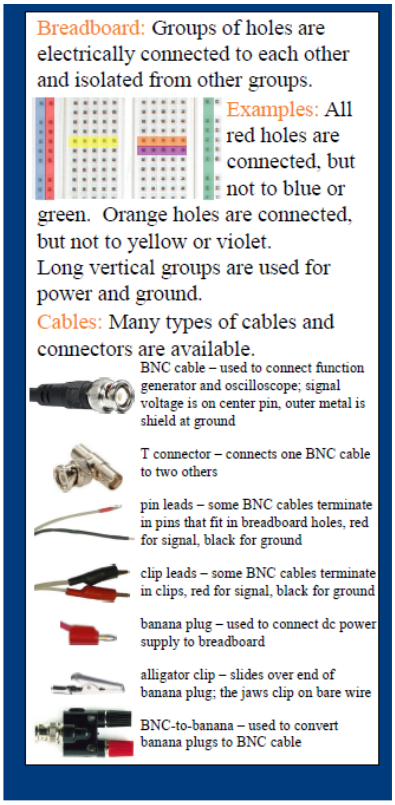

Here there is what you must bring to the LAB sessions:

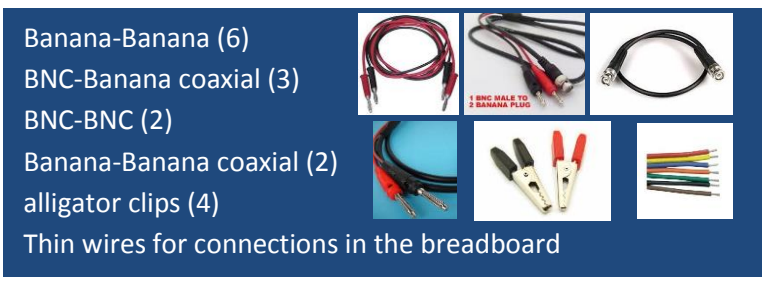

- Notebook for Lab Notes
- Pre-Lab exercises (done ☺)
- LAB manual

and: Resistors, Capacitors , Wires, Breadboard, alligators…

The lab will provide you a box with all the necessary wires.
