EXERCISE

- Move the programming of the WebSocket client from the previous exercise (push functionality) to be executed by a Service.
- From that service, notify the reception of a new message with a status bar notification and a broadcast event.
- Modify the **MessagesActivity** registering a broadcast receiver to catch the newly received message.
- Start up the service when the user has logged into the app.

EXERCISE

- **Note**: make use of the provided java class implementing the service: PushService
